

Connections for Aged Care

Connections for Aged Care offers you a comprehensive range of future-focused, high performance telecommunication services.

Your network aggregation solution

Perhaps you need the speed of corporate grade fibre optics or the affordable simplicity of ADSL or wireless connectivity. Connections for Aged Care (CAC) can empower you with a customisable array of broadband technologies, easily tailored to suit your particular telecoms or data transfer requirements. No matter your organisation's type, size or number of access locations, you'll discover that we're renowned Australia-wide for:

- Flexible technologies that can evolve along with your bandwidth or access tail needs
- Coverage that's reliable and efficient, no matter your location
- Simple installation, maintenance and billing.

Flexible

With the technological landscape changing so rapidly, CAC provides you with reassurance that you're using the latest and best tools for all your telecommunication needs. Moreover, we offer you simplicity and flexibility on pathways, components, hardware, service solutions and price, all of which can be specified to optimise your location and coverage requirements. Add superior scalability plus seamless integration and you have even more control over the speed and bandwidth capabilities that best suit you.

Greater coverage

CAC uses NEC's network, which ranks among the best in the country, yet also utilises Australia's other Tier 1 carriers. This means you can benefit from business grade nationwide coverage virtually throughout Australia. The intention is that all your remote offices can access the same network speeds and efficiencies enjoyed by your headquarters.

All together more simple

The genius of CAC is that it provides unlimited network capability and, therefore, unrivalled adaptability that allows users to specify their own product and operational needs.

It's real beauty, however, is that these class-leading access technologies are delivered via a single format; namely, a high-performing Ethernet connection that allows you to focus on your business and not fret over complicated technologies.

We also simplify the ordering and installation process. You can depend on us to efficiently handle all the background admin, so you only have to deal with one single point of contact for admin and billing.

Technology

Carried over our high availability ATM/Gig E national core network, CAC broadband services range from copper, fibre and wireless technologies to last mile solutions including ADSL/ADSL2+/SHDSL and even 3G or WiMax.

Our national network infrastructure is augmented with other third party access networks to ensure completely dependable national coverage with a core-target uptime of 99.99%.
