

# Internet for Aged Care

**Our Broadband Internet access options are designed to suit a diversity of Web requirements.**

## Simple. More secure.

While the online environment is increasingly complex, end-users just want to access the Web's full commercial and social potential without any hassles. That's why we offer a comprehensive suite of internet-based solutions:

- Optimised reliability and scalability
- Best-in-class Anti-Spam, Anti-Virus and Intrusion Detection protection
- Access, DNS, email and web hosting options.

## Quality. Control.

NEC's ethos is to make it easy for your organisation and also for the end-user. So, all our web and email control interfaces provide a choice of access options; from the basic email user login or the more advanced secured domain owner level. The latter provides you with discreet control relating to domains and DNS records, email, filtering, security settings, plus traffic reporting and web content management. This functionality also allows you to administer your web domains without the need for technical support and its associated costs.

## Technically, we've got it covered.

For ease of integration and use, Broadband access solutions include the allocation of IP addresses and Domain Name service functionality.

Our solutions are delivered to users throughout Australia as bridged Ethernet or PPP connections. With broadband access to virtually anywhere in Australia, we provide truly nationwide business grade Internet services. In addition, our network backbone (employing the latest Gigabit Ethernet MPLS-based network) provides the assurance that we can rapidly expand to meet your future demands. For extra reassurance, dynamically updated security processes plus a comprehensive backup regime enhances overall system protection.

## Security. Speed. Service.

Our Virtual ISP platform offers a comprehensive suite of ISP access and hosting solutions that enable organisations - large or small - to access real time e-information interactions. Our Internet for Aged Care solution will appeal to entities looking for business-grade Internet-based systems that provide:

- Scalable, high quality ISP services, which are cost effective and reliable
- Automated and updated protection from corruption, plus industry-leading response times plus a proactive threat library
- 24x7 monitoring, technical support and troubleshooting.
