

Harmony SASE by NEC

Security Assessment

Independent Miercom testing found Check Point prevented 99.9% of new malware in the first 24 hours — outperforming Cisco, Palo Alto Networks, Fortinet, and Zscaler.

The Challenge

Legacy VPNs and siloed tools create blind spots, slow down users, and leave organisations exposed. Hybrid work, SaaS adoption, and cloud transformation demand a unified, future-ready security model.

The Solution

Secure Access Service Edge (SASE) converges networking and security into a single cloud-delivered service. It protects users, applications, and data wherever they are — delivering fast, secure access without the complexity of multiple point solutions.

Where to Start?

A complimentary Security Assessment gives you immediate value while showing how SASE can fit your environment.

Scope

- Review of your current remote access, SaaS security, and policy enforcement.
- Identification of potential risks and blind spots across users, devices, and applications.

Duration

- 2–4-week duration for workshops and proof of value.
- Complimentary, no obligation.

Business Value

- Benchmark your organisation against industry best practice.
- Gain independent insights from NEC consultants backed by Check Point expertise.

Outcomes

- Clear risk heatmap and exposure summary.
- Tailored remediation roadmap aligned to your environment.
- A strong ROI case for SASE adoption.
- Option of a fully managed solution.

Why NEC + Check Point?

NEC combines deep consulting and integration expertise with Check Point’s market-leading SASE platform. Together, we help organisations simplify security, reduce risk, and deliver a seamless user experience across cloud, branch, and remote workforces.

Next Step

Cloud, remote, and hybrid work demand a new approach to security.
