NEC Digital Transformation Services

Successful transformation through end-to-end support

au.nec.com

An NEC managed digital transformational journey is well planned and de-risked

Background

The emergence of sophisticated digital technologies has transformed the way that people communicate, collaborate and do business. In order to gain or retain competitive advantage, organisations need to embrace the new world of digital by embarking on a digital transformation path.

As a stepped program of business improvements to people, processes and tools, digital transformation is geared towards maximising the potential business contribution of online technologies and media.

Despite many organisation's believing that digital will disrupt their industry, very few are adequately prepared for projected disruption due to digital trends.

As a consequence, industry experts have noted a lack of leadership and alignment amongst management and legacy IT systems, while the shortage of talent and conservative company cultures present considerable hurdles to compete in the ever-changing digital landscape.

By finding the right solutions and investing in the right changes, your organisation can strive for digital maturity and thrive for decades to come.

Strategy	Business Architecture	Application and Data	Technology	Finance and Projects

Cloud Transformation

Determine candidates for immediate cloud transformation and understand the hosting rationale for your particular application and infrastructure portfolio.

Lifecycle Management

Demonstrate the lifecycle management of all running platforms and run detail report of the current technology risks inside each business unit.

Capability Assessment

Communicate to the leadership group the investment profiles that affect their abilities to deliver value.

Financial Analysis

Provide detailed financial analysis to gain insights into your technology investments and operations.

NEC DTS provides comprehensive insight and access into IT operations

NEC \Orchestrating a brighter world

Common challenges

- Difficulty accounting for IT spend
- Unsure how to manage transformational risks
- Desire to mature IT capability
- Align IT to the business strategy
- Current state is unknown or can't be explained clearly
- Pressure to justify IT budget
- Identifying wasted IT resources
- Accessing and understand the IT landscape to execute well informed decisions
- Exercising true IT governance.

Service overview

NEC DTS is a service that baselines, plans and enables successful digital transformations. It does this through NEC's unique ability to ingest the often-disparate information that organisations hold regarding their enterprise architecture.

Service benefits are quickly realised, giving customers confidence to undertake transformational activities at an increased scale and tempo.

The service has integrated surveys to prepare for cloud transformations and produces executable transformational road-maps that are risk managed and traceable.

Innovation

Innovation is difficult, if not impossible if you are held back with IT housekeeping and operational issues. NEC DTS allows you to capture an innovation leadership position through transformation to a best practice model.

Business success

Once the IT operational issues have been addressed, CIO's can focus on the design and provision of the business services that can provide assurances or a competitive edge.

Identify and reduce costs

Enterprise transformation does not have to result in enterprise level risks and debt. NEC DTS identifies savings, efficiencies and business benefits.

Quality and governance

NEC DTS comes with its own CMDB, ArchiMate2® mapping software and configurable PMO that integrates traditional waterfall project management and agile methodology.

Benefits

NEC DTS gives customers confidence to undertake transformation activities at an increased scale and tempo

Financial

- Optimise your investment in current-state architecture prior to transformation
- Manage your transformation, capital, procurement, financial risks in a more comprehensive way
- Mitigate redundant IT spending and resource waste
- Understand and be able to manage any cloud transitions in a logical way
- Map the entire spectrum of infrastructure investments for real business outcomes
- Highlight your spend-analysis. Are IT investments and costs based on approved business strategies?

NEC DTS enables you to manage risk more effectively

Benefits

Environment

- Highlight a cloud transformation capability map
- Execute the IT strategy based on informed and logical decisions
- Increase business understanding of the IT landscape
- Run detailed reporting on current technology risks inside each business unit
- Manage life-cycle of all running platforms
- Test and review models impact and dependencies
- Report on business capability migration readiness
- Adopt ANY enterprise model backed up by sound decision making.

Compliance

- Incorporated TOGAF and ArchiMate® principles ensure best industry standards
- Reduce risk and complexity through a holistic view
- Enforce standardisation of tools without limiting flexibility
- Manage IT processes and compliance with greater consistency
- Allocate critical resources with full governance.

Why partner with NEC?

Unlike consulting firms or IT service providers, NEC DTS is the only end-to-end service that can provide integrated insights from the business strategy to the individual physical or virtual server.

Our customers have the ability to enter the innovation space through comprehensively putting to bed the IT compliance, housekeeping and operational issues holding them back.

NEC DTS is only focussed on our customer's success. As a best practice and open sourced framework it allows IT to underwrite and energise outcome realisation.

We have extensive multi-vendor expertise in migrating customers to new technologies and integrating cloud environments with legacy infrastructure.

We work with you to deliver holistic, successful business solutions that maps to your strategy, operations, people and processes. We also understand the impact that having the right people with the right skills has on your business success.
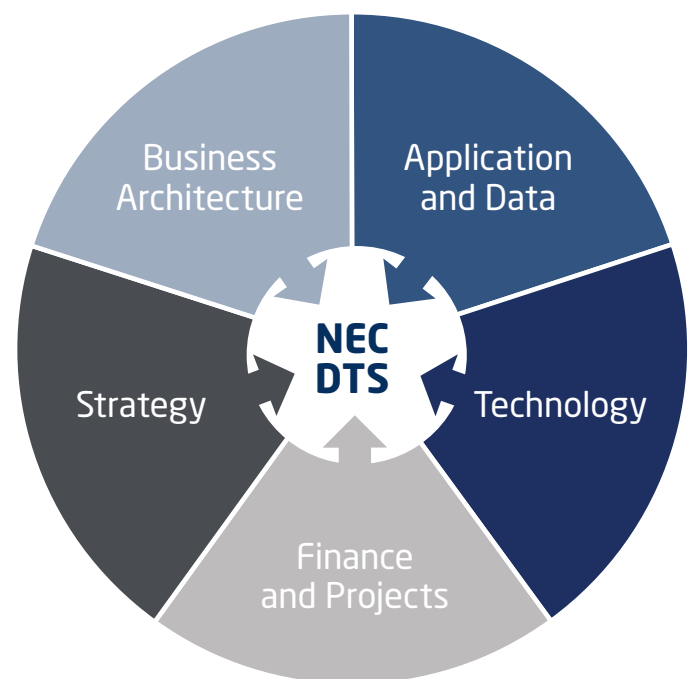

NEC DTS baselines, plans and enables successful IT transformation
